## OVERVIEW

**American Modern AM-5** is a floor-based guitar preamp, created with a revolutionary FETube technology, based on FET transistors used to emulate the tube preamp work. Replicating popular amps' sound it can boast with “tube-like” dynamics allowing to convey all the nuances of playing style.

**AM-5** emulates the legendary American recto-hi-gain, which is way back appreciated and admired by lots of players who love thick, heavily overdriven sound with saturated lows. The preamp is equipped with two separately controlled channels, an effect loop and headphones output with a built-in speaker simulator.

## CONNECTION POLARITY OF DC ADAPTER

## APPLICATION

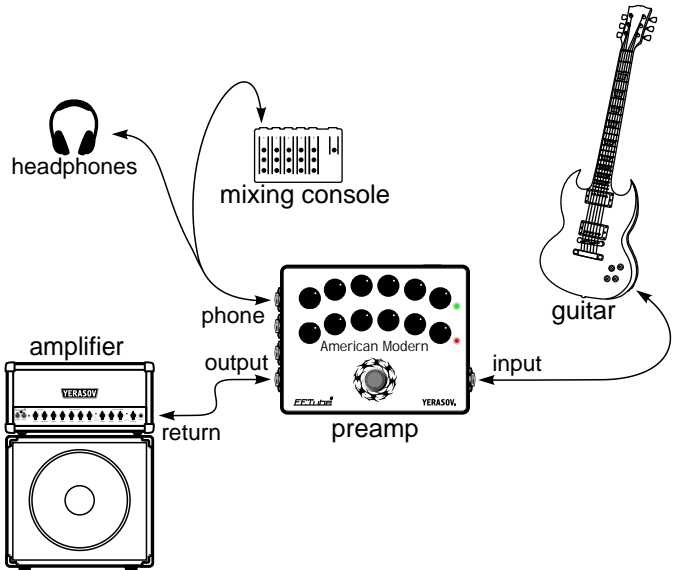

**AM-5** is powered with an external 9 volt DC adapter.

**AM-5** has separate **GAIN** and **VOLUME** controls for clean and overdriven channels. The channels are switched with a button switch. Preamp has a separate tone circuit for each channel which makes it more versatile and flexible to use.

Green LED indicates the clean channel is active, and the overdriven channel is indicated by a red LED. **AM-5** has two outputs: **PHONE** (with combo-emulating) for direct connecting to a mixing console, and **OUTPUT** to connect the preamp to a guitar amplifier, or to a **RETURN** input.
